OTHER OBSERVATIONS/COMMENTS:

coming down on charcoal patches and more compact layer with more clay; very little tile or stone; amphora pieces pulled up probably belong to 10097; light orange on top; the edge was covered by 10094;

INTERPRETATION:

Most likely collapse material covering a plaster facing of a section of wall; these top contexts are confusing, since a section was cut in the center to remove 10093, and we only have small sections of preserved stratigraphy.
