OTHER OBSERVATIONS/COMMENTS:
 only partially excavated to reveal the rest of wall 17118=10106
 charcoal especially concentrated on W side of trench (corresponds to black TSI), and SE corner (where he found red TSI)
 patches of yellow soil around metal special finds

INTERPRETATION:

Surface onto which the t.s. stacks # w+d of 10097 fell, but why covering wall 10106 = 17118? equal to 17050 in SE Ar. 17.

similar in color, compaction, and color to 17050, which was also only partially excavated in the SE sector of Area 17000 - if surface or context covering occupation level, it may be worth it to return to excavate. RGV June 10, 2019
