OTHER OBSERVATIONS/COMMENTS:

in SW corner large concentration of hammer scales, ceramics increased at the bottom of the level

This context covers the entire trench because it is largely mixed in terms of soil color but has similar material and color patches throughout context

about 100 special finds, mostly scrap iron but some tools as well

2 broken amphorae found, 1 in south corner had soil taken

INTERPRETATION: This is a grey-orange-black layer that covers the entirety of the trench. While there are multiple colors it is the same because they are mixed up throughout the area. We have found dozens of pieces of metal and our pottery & bone count is up as well. We believe this may be a possible destruction or occupation layer of blacksmith's workshop
