**OTHER OBSERVATIONS/COMMENTS:**  
 The surface below which calf skeleton was found. Eastern side had denser charcoal concentrations. equalized to 17128 in northern sector

**MATRIX:**

		17148		
		17150	This context = 17128	
		17151

CONTAMINATION RISK	5 4 3 (2) 1				

**INTERPRETATION:**  
 Deposit contained 'only' isolated patches of charcoal, occasional tile fragments, unworked stone and daub. This suggests that it is associated with the fire destruction event, and perhaps represents a roof collapse. It is below the first layer rehard, so contamination is possible but unlikely.

This layer must have been a surface, as the cow skeleton was found on it in situ.
