FORMATION PROCESS: ANTHROPIC <input checked="" type="checkbox"/> NATURAL <input type="checkbox"/>	DEFINITION: rectangular mortar deposit in line w/ 20004
	SU TYPE: <input checked="" type="checkbox"/> DEPOSIT <input type="checkbox"/> CUT <input type="checkbox"/> STRUCTURAL
	DISTINGUISHED BY: <input checked="" type="checkbox"/> COLOUR <input checked="" type="checkbox"/> COMPACTION <input checked="" type="checkbox"/> COMPOSITION

<b>DEPOSIT:</b> 1. Composition (sand/silt/clay) 2. Compaction 3. Colour 4. Clarity of Limits (clear/not clear/exc. lim. for N/S/W/E/depth) 5. Dimensions 6. Method & Conditions	<b>STRUCTURAL:</b> 1. Type (wall, cistern, etc.) 2. Orientation 3. Technique (pisé, ashlar, etc.) 4. Bonding Material 5. # of Coursings 6. Facing/Finish (plaster, etc.) 7. Dimensions 8. Related architectural features	<b>DESCRIPTION:</b> 1. Silty Mortar deposit 2. fine granular structure 3. light grey 4. clear for all 5. 68cm x 39 x 66 x 44cm (see plan) D: 5-7cm deep 6. Pick trowel brush
---	--	--

**OTHER OBSERVATIONS/COMMENTS:**  
 some slightly green mortar on the NW side of the deposit. seems to be on top of wall fill. As we came down there were chunks of concrete. On the North side it appears that the mortar w/ concrete continues under the adjacent context.

**INTERPRETATION:**

May have been remnants of badly deteriorated volcanic stone (tuff) used to make mill stones (possible example found beneath this context. The mill stone was most likely reused to construct the wall, but may have originally been used for production purposes - these stones were common in workshops and not limited to grinding grain.
