OTHER OBSERVATIONS/COMMENTS:
 Although some patches were more brown, yellow, or charcoal-colored, we determined all belonged to the bottom of the collapse material (due to absence of big tile fragments, but continued presence of patches of charcoal). After a pass of ~5cm at the north end of trench, found edge of circular/oval feature, approx. 1m in diameter; switched to trowel & hand pick in that area.
 - Peeled off the coccio pesto surface (20048); equals 20077 N extension

INTERPRETATION:

Bottom of collapse. Accumulation of soil between the cocciopesto surface and the tile/beam collapse layer may indicate abandonment of area before destruction event. Charcoal patch in northeast corner of trench was evidence of further collapse material filling feature 20049. Cocciopesto fragment 20061 covers this context in SW corner
