OTHER OBSERVATIONS/COMMENTS:

- medium brown layer of, potential, fill w/ scarce pottery and bone inclusions - far less materials than dump 20021 above
- went down 3 or 4 passes & soil remained unchanged ~ 10 cm
- soil dries hard & friable but dense underneath, slightly compacted
- large riverstones concentrated in NE corner

NOTE - removed some of this context in SE and SW corners with 20021

INTERPRETATION:

- 20021 appears to have been a dump with animal bones, amphorae necks elite glass, misfired pottery
- 20025 however, materials are sorer and a continuation of a white brown soil, indicating an accumulation under dump or bottom of dump; may be a purposeful fill and levelling layer, assoc. with post-fire occupation.
