OTHER OBSERVATIONS/COMMENTS:
 Appeared during first pass of 20039, determined it was covered by last remnants of 20036 (tile collapse layer), clearly silt atop clayey soil that characterized 20039. In the SW corner of trench between 20061 and the trench extent's soil is much redder and tile & stone collapse continues much deeper than elsewhere, possibly new context - may not excavate

INTERPRETATION:
 section of cocciopesto surface continuing into W profile wall - unclear if in collapse or in situ.
 could 20039 be a preparation for a second floor of which this piece has been preserved?
