INTERPRETATION/DISCUSSION:

- A fill of a probable kiln. There appeared to be remnants of the outer wall kiln structure among rubble on the Northern side of the SU.
- Now believed to be a deposit covering BACINO 17013 = 17061 and wall 17012; may be associated w/ abandonment of dolium structure (RGV - 12 July)

COMMENTS/OBSERVATIONS:

We extended, on 12 July, to the Northeast over wall 17012

- Accumulation of small stone fragments may be remains of stores from wall 17012, made friable from exposure to high heat (14 July, R6)
- may be equal to 17014?, but this SU has a less concentrated accumulation of small stone frags.
