**INTERPRETATION/DISCUSSION:**  
 This layer was very similar to others in area 17000 that were directly below [17001] clearing layer; limit between 17014 and 17015 not super clear, but 17015 has less concentrated scatter of small stone frag. and somewhat lighter in color.

**COMMENTS/OBSERVATIONS:**  
Layer appears to be an interface or natural accumulation of soil over possible use layers of kiln. Covered cooked earth (terra concotta) to south, and a compact dark reddish brown layer.
