INTERPRETATION/DISCUSSION:
 (Relationship to 17051? - Appears to be above 17051.) - more to observation.
 Cobbled surface - small stones and cobbles packed in light mortar, similar to surface found in 18000 - (possible way to IMK the area?) Does not abut 17003, though at roughly same elevation as column base; must be later or contemporary phase. Continues into sondage limits to W, S, & E.

COMMENTS/OBSERVATIONS:
 Only pebbles, with concentration of larger stones in the Northwest of the context. No tile, pottery, etc. Appears to be a gap in the northern section, may have been removed during excavation of 17044 (stopped because we were pulling up pebbles).
 Surface may relate to original occupation of structure (in phase 4/ 17003?) suggesting the production phase (1706), which is c. 20-25 cm above represents reuse of structure and maybe final phase of use.
