**INTERPRETATION/DISCUSSION:**  
 Charcoal beneath this layer. On the western edge of this context were some tiles. Tiles also at lowest level above charcoal and greenish clay. Some nails along south edge. Interpreted as a dump into a cut, possibly related to industry due to strong orange colour and lack of materials.

**COMMENTS/OBSERVATIONS:**  
Part of this context was excavated on 17 July. Excavation completed 20 July. Floor level uneven, tiles/stones at floor level not carefully arranged, but seem to form a thin layer separating 17087 from the charcoal/clay below. Possibly extends beyond trench well to the north.
